SUMMARY:

- Salesforce Developer with **2.5+ years of experience** working on Salesforce CRM, primarily on **Sales Cloud, Service Cloud** and partially on **Experience Cloud**.
- Experienced in delivering custom Salesforce solutions using **Apex development, Lightning Web Components (LWC), Salesforce Flows, and REST API integrations** based on business requirements.
- Strong hands-on experience in **managed package development**.
- Good working knowledge of **Agentforce**, including configuring agents and exposing packaged Salesforce functionality through agent-driven execution.
- Experience in the **design, development, and deployment** of Salesforce solutions aligned with business requirements.
- Implemented **asynchronous Apex** to handle large-volume data processing and long-running operations efficiently while adhering to Salesforce governor limits.
- Optimized **Apex code and SOQL queries** by following governor limit best practices to improve performance and ensure scalable solutions.
- Integrated **Lightning Web Components with Salesforce Flows** to extend Flow functionality and deliver dynamic, user-friendly interfaces.
- Performed systematic **debugging and error handling** to identify issues quickly and ensure stable, reliable application behavior.
- Managed **user access and data security** using profiles, permission sets, roles, and sharing rules in Salesforce.
- Worked collaboratively with **team members and stakeholders** to support development, testing, and deployment of Salesforce solutions.
- Experience using **version control systems such as Git and GitHub** for source code management, collaboration, and tracking changes across Salesforce development activities.
- Developed and maintained **Apex test classes** to ensure required test coverage, validate business logic, and support successful deployments across environments.

SALESFORCE CERTIFICATIONS:

Salesforce Certified Administrator

Salesforce Certified Agentforce Specialist

Salesforce Certified AI Associate

Salesforce Data Cloud (Fundamentals)

EDUCATION DETAILS:

Bachelor of Technology – Information Technology(2020-2024)

Poornima College of Engineering, Jaipur (Rajasthan Technical University, Kota)

WORK EXPERIENCE:

Raptbot Technologies Pvt. Ltd., Jaipur

(February 2024 – Present)

Responsible for the design, development, and deployment of Salesforce solutions aligned with business requirements. Actively involved in custom development using Apex and Lightning Web Components, extending Flow-based functionality, and implementing REST API integrations with external systems. Worked on Agentforce enablement by configuring agents and exposing packaged Salesforce and Flow-based functionality through agent-driven execution. Contribute to managed package enhancements, package consolidation activities, testing, deployments, and maintaining technical documentation to ensure scalable, secure, and maintainable Salesforce solutions.

PROJECT EXPERIENCE IN SALESFORCE:

Data Table Enhancement, Agentforce Enablement & Managed Package:

Worked on a client-facing ISV solution using multiple 1st Generation Packages (1GP) to deliver custom Lightning Data Table components within Salesforce Flows. Enhanced functionality by developing Lightning Web Components (LWC) with advanced filtering and improved data handling. Consolidated two unmanaged and one managed 1GP packages into a single 2nd Generation Managed Package (2GP) and configured a Salesforce Agentforce Agent to expose the packaged functionality through agent-driven execution.

Salesforce REST Integration Project:

Designed and implemented Apex REST services to integrate Salesforce with external systems. Developed APIs for creating, updating, and retrieving operations and implemented OAuth 2.0 secured REST callouts. Utilized asynchronous Apex to process large data volumes efficiently and performed API testing using Postman before deployment.

Managed Package API Version Upgrade and Production Deployment:

Worked on upgrading managed package Apex classes to a higher Salesforce API version to align with platform updates. Identified and resolved compilation issues, deprecated API usage, and errors introduced during the upgrade process. Fixed and refactored associated test classes to ensure successful deployment and required test coverage. Deploy the upgraded managed package to Production using Copado, ensuring a smooth and error-free release.
